

A large white wind turbine stands on a grassy hill. The sky is filled with soft, white clouds, and the sun is visible behind them, creating a bright glow. The turbine's tower is white with a green section near the base. The blades are spread out, and the overall scene is peaceful and natural.

Your PARTNER
for projects in Renewable Energy

Energy with future - Renewable Energy

The rise of renewable energies started already a few centuries ago. Beside the production of hydro power, the focal point moves more and more to wind energy, solar energy, biomass and geothermal energy.

The Nordum Akademie works for more than 10 years successfully in the field of renewable energies. Our services include technical and economical assessment, monitoring and appraisal of environmental issues.

Our company is projecting and managing wind energy plants in the megawatt range and is also being able to look back on 20 years of gaining experience in solving a wide range of ecological issues.

Beside the conception of projects in the field of renewable energies in Germany, e.g. wind farms, our company is working together with partners to realize projects on the international market.

project review - project planning - funding - management
